- *One e-liquid pod can contain as much nicotine as a packet of cigarettes.*
- *Ofsted has identified youth vaping, and the associated poor behaviour, in some of its reports*
- *Survey data from over 6,500 15-18 year olds has - 95 per cent of respondents say that vaping is one of the main substances used by their peers, and over 70 per cent name it as a substance that they think is causing their peers the most problems.* ¹
- *Nicotine exposure during adolescence, a critical period for brain development, can cause addiction and can harm the developing brain.* ²
- *Nicotine exposure during the teenage years can harm brain development, which continues until about age 25. It can impact learning, memory and attention, and increase risk for future addiction to other drugs.* ³
- *A survey of 4000 teachers in the UK found 85% of teachers believe vaping is a problem on school premises.* ⁴
